## The aluminum gates par excellence

A range of modern bespoke aluminum gates, available in pedestrian swing cantilever sliding gates and with a wide range of finishes and colors.

**No maintenance!**

### Custom aluminum gates

All our sliding gates are designed and manufactured in Italy, a guarantee of quality and reliability. All are made of aluminum, a material with many advantages:

- **No maintenance:** aluminum does not require any treatment or maintenance. A simple cleaning with soap and water is enough to keep the original look of your gate.
- **Stainless Steel:** Aluminum is weatherproof and corrosion resistant. The lifespan of your gate will therefore be much longer than with other materials.
- **Ecological:** aluminum is infinitely reusable and easily recyclable.

### Practicality

- The great advantage of a motorized sliding gate obviously lies in the fact that it is no longer necessary to get out of the machine. It's safe when it's dark and especially comfortable when it's raining!
- Thanks to the long-distance remote control, you can anticipate opening and enter your garage or yard in seconds.
- Our sliding gates are equipped with specific motors, designed to guarantee speed and ease of opening. There is no need for physical strength to open them.

## Our types of openings

### Swing gate

The aluminum door consists of two fronts that open like a front door. These open inwards (at home) or outwards (the street).

It is the most suitable solution for difficult or small terrain, where the installation of a sliding portal in aluminum is not an option. It also allows for a wider opening than a portal by alim sliding.

### Sliding gate

Consisting of a single flap, the sliding gate opens by sliding sideways on wheels along a track.

Generally motorized, it is particularly functional and offers faster opening.

Requires a playing surface slightly larger than the portal width.

### Swing gate Monoblock

The monobloc structure simplifies the installation of the gate, allowing a simple and quick installation. The second advantage is linked to the freedom to choose whether to have a pre-installed automation motor or to have the possibility to install it even in a second moment.

### Sliding gate Monoblock

The monobloc structure simplifies the installation of the gate, allowing a simple and quick installation. The second advantage is linked to the freedom to choose whether to have a pre-installed automation motor or to have the possibility to install it even in a second moment.

### Swing gate Automatic monoblock

The monobloc structure simplifies the installation of the gate, allowing a simple and quick installation. The second advantage is automation installed is tested ready to be inserted in the foundation excavation in very little time...

## A unique aluminum gate and FOREVER!

### Information:

#### CE marking in accordance with the EN 13-241 standard.

Our gates have obtained certification in the following tests:

- resistance to wind load
- mechanical strength
- safe opening
- maneuvering forces
- absence of release of substances
- dangerous

#### Welded with pulsed arc and TIG welding machine

Each of our products is assembled by means of pulsed arc and tig welding, in order to guarantee durability and stability over time. our gates are to be considered eternal ...

#### Weather resistant

Unmatched strength and durability, no rust, no maintenance. Furthermore, the painting is certified to withstand high salinity environments, such as seaside resorts.

#### Made to measure for you

To guarantee perfect resistance of the assemblies, we rely on highly qualified labor. Each product is assembled by a single operator and is checked to ensure a high quality finish.

### Why and how to maintain the lacquer of your aluminum product?

Inside, as well as outside, anodized or lacquered coatings are intended to give aluminum structures a durable decorative appearance.

Like all materials, they undergo aging over time which can gradually lead to an alteration of their decorative properties, if adequate maintenance is not performed on the coating.

Coatings are subject, throughout their life, to numerous attacks: bad weather, pollution, dirt, dust, sowing of microorganisms and some constraints due to the environment.

Dirt repairs and concentrates aggressive elements. It is imperative to regularly remove this dirt in order to limit their effect on the aging of the surface.

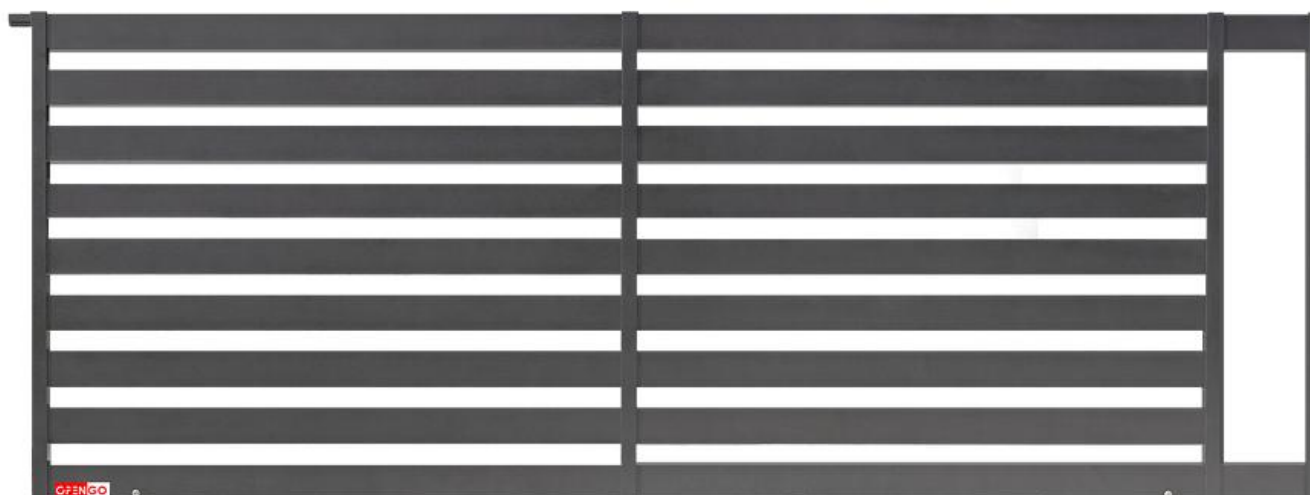

The removal of dirt and aggressive deposits must be carried out according to the rules of the art described below, using suitable products.

The frequency of cleaning depends on the environment and the soil concentrations on the surface. The more frequent cleaning, the easier and cheaper it is.

## ZAIRA K1 SLIDING

Aluminum gate

Consisting of a single flap, the sliding gate opens by sliding sideways on wheels along a track. Generally motorized, it is particularly functional and offers faster opening.

Requires a playing surface slightly larger than the portal width.

The OPEN GO aluminum gate guarantees an extraordinary result to the design of your home.

The lines are simple and refined with wide horizontal slats.

They are also extremely resistant and do not rust and for cleaning a simple washing with warm water and soap is sufficient, completed by rinsing with clean water and rubbing with a chamois leather.

### Top-of-the-range execution quality.

Our unparalleled, tailor-made added value

Our role is to make your every wish come true. We have (almost) no limits except yours! We master the art of welded aluminum as well as that of assembled aluminum. From design to manufacturing, we will always find a solution to suit your outdoor landscaping project, which is what makes our main difference.

## ZAIRA K2

Aluminum swing gate

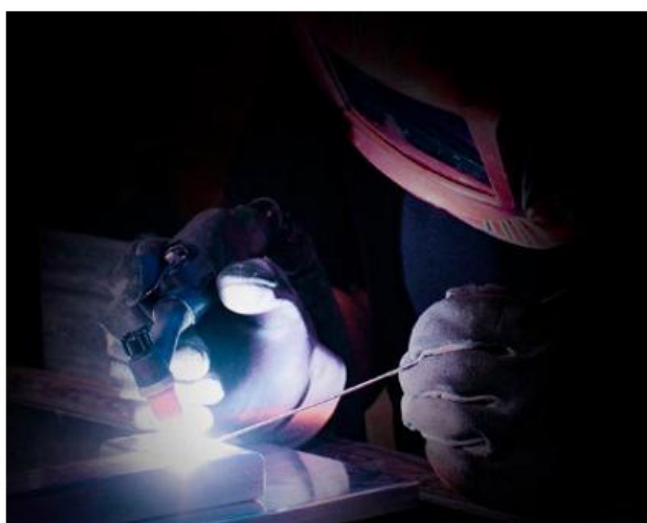

### SWINGING GATE

The OPEN GO aluminum gate guarantees an extraordinary result to the design of your home.

The lines are simple and refined with wide horizontal slats.

They are also extremely resistant and do not rust and for cleaning a simple washing with warm water and soap is sufficient, completed by rinsing with clean water and rubbing with a chamois leather.

### Top-of-the-range execution quality.

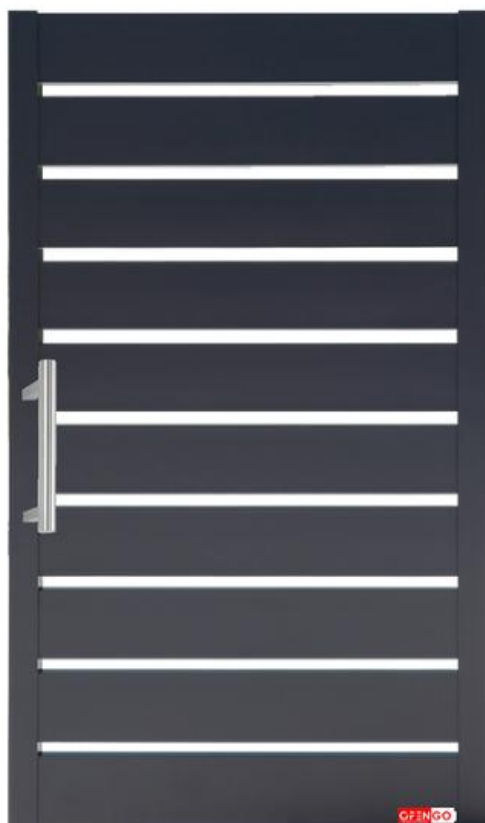

Aluminum is a material of excellence with multiple qualities, strength, unalterable and 100% recyclable.

Aluminum also has the advantage of offering reduced maintenance and satisfying all creative desires in terms of shapes, colors and decorations for an ideal harmonization with all styles of environment.

For unparalleled strength, from the study to the finalization of the product, we carry out all the operations (cutting, bespoke folding, manual assembly, welding and thermo lacquering) with 100% made in Italian products. To meet your needs and carefully carry out your development projects, we have perfect control over the entire production process. Family business, we are by your side, to guarantee you the best experience. Your well-being is our challenge

## ZAIRA K3

Pedestrian aluminum gate

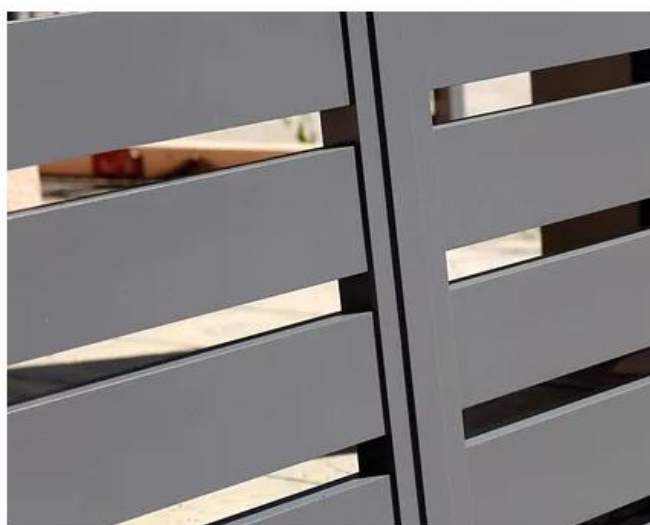

### PEDESTRIAN GATE

The OPEN GO aluminum gate guarantees an extraordinary result to the design of your home.

The lines are simple and refined with wide horizontal slats.

They are also extremely resistant and do not rust and for cleaning a simple washing with warm water and soap is sufficient, completed by rinsing with clean water and rubbing with a chamois leather.

This perforated aluminum gate emphasizes solid yet clean lines with its 150mm aluminum slats. It will accompany your outdoor life with simplicity and efficiency. Perforated, it will still maintain your privacy because the space between its horizontal slats is optimized to 50mm, enough to cut out the view!

## **ZAIRA K4**

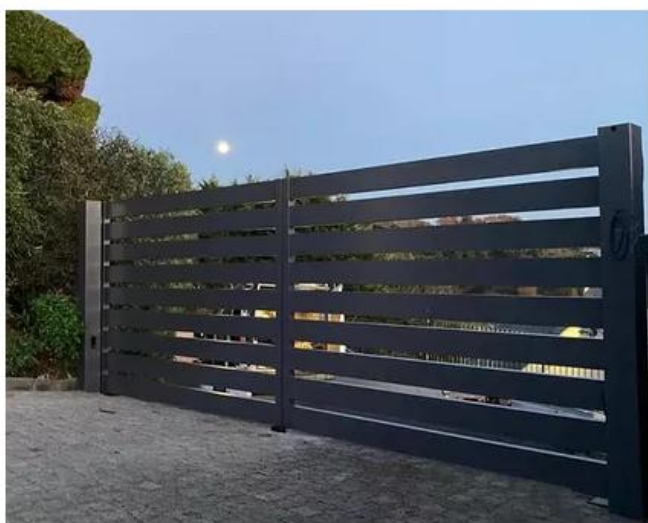

### **NEW MONOBLOCK**

A sturdy structure made of painted steel, ready to be laid in the foundation excavation.

#### **MONOBLOCK SWING GATE**

The monobloc structure simplifies the installation of the gate, allowing a simple and quick installation. The second advantage is linked to the freedom to choose whether to have a pre-installed automation motor or, in any case, to have the possibility of installing it at a later time.

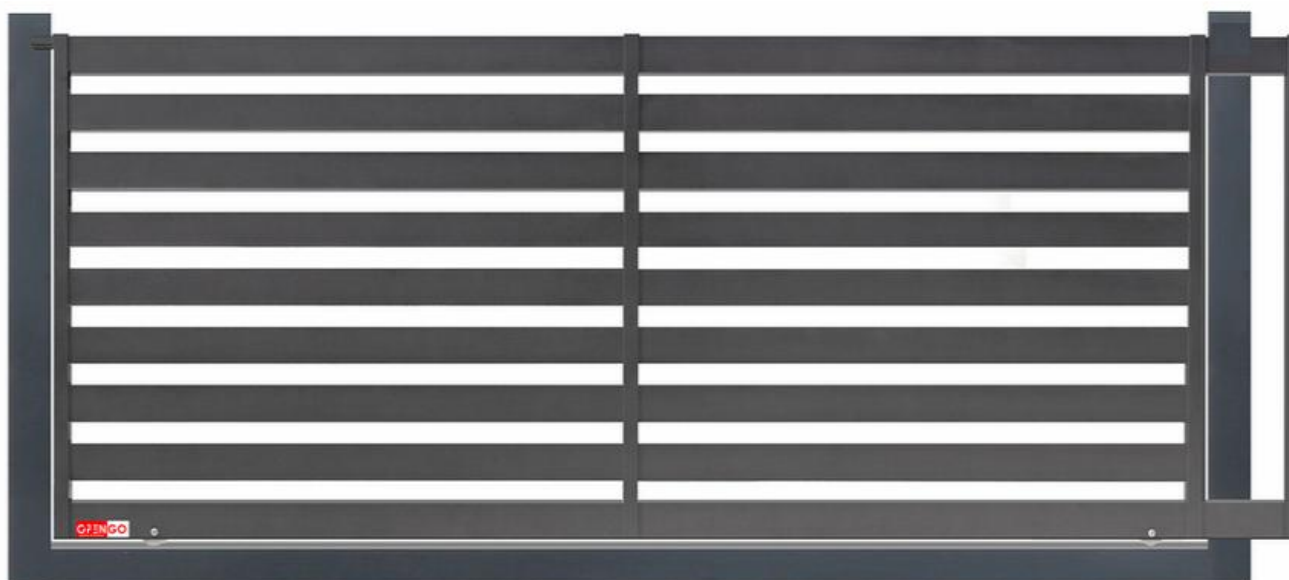

To last over time, Alutrend gates, before being assembled, are treated with a mechanical pickling with automatic shot blasting machines, which make the surfaces perfectly clean and satin, to ensure maximum adhesion of the paints.

### Why choose an aluminum gate?

For your gate, you can choose between wood, PVC or aluminum. We have chosen to work exclusively on aluminum, on all our ranges of cantilevered sliding and pedestrian sliding gates. This material has many advantages, especially for the maintenance and durability of a portal.

## ZAIRA K8

Fences all vigorously made of aluminum

### FENCE

The OPEN GO aluminum fences guarantee an extraordinary result to the design of your home.

The lines are simple and refined with wide horizontal slats.

They are also extremely resistant and do not rust and for cleaning a simple washing with warm water and soap is sufficient, completed by rinsing with clean water and rubbing with a chamois leather.

### Maintenance of an aluminum gate

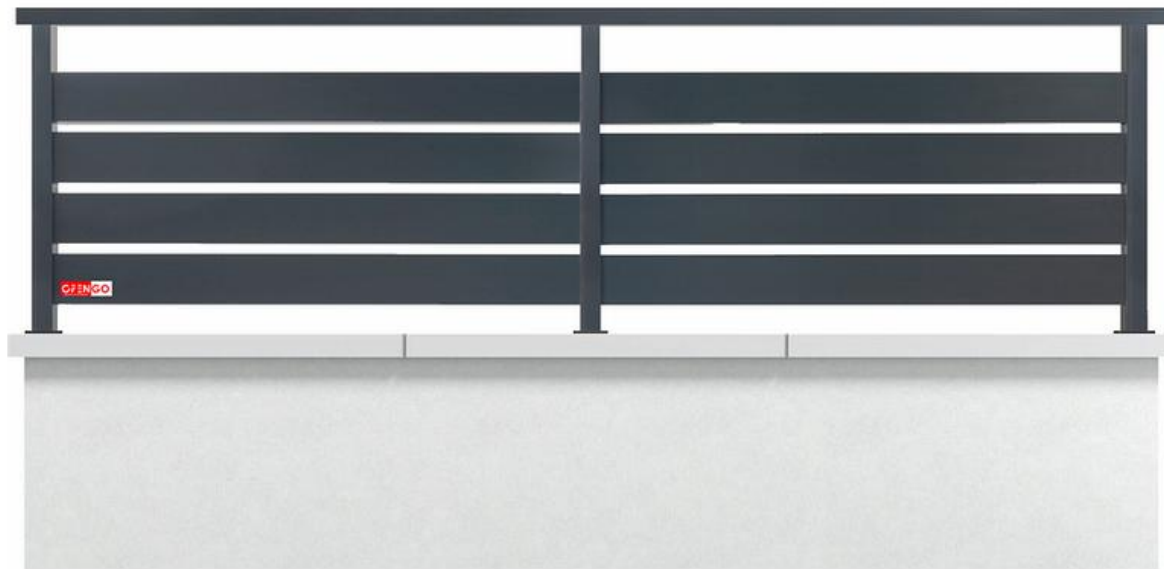

Aluminum gates require very little maintenance:

Very resistant, aluminum does not rust, unlike iron gates.

For cleaning, a simple wash with warm soapy water, complete with rinsing with clear water and cleaning with a chamois leather is sufficient

## ZAIRA K9

Balustrade all vigorously in aluminum

### BALUSTRADE

The OPEN GO aluminum balustrades guarantee an extraordinary result to the design of your home.

The lines are simple and refined with wide horizontal slats.

They are also extremely resistant and do not rust and for cleaning a simple washing with warm water and soap is sufficient, completed by rinsing with clean water and rubbing with a chamois leather.

### Maintenance of an aluminum gate

Aluminum gates require very little maintenance:

Very resistant, aluminum does not rust, unlike iron gates.

For cleaning, a simple wash with warm soapy water, complete with rinsing with clear water and cleaning with a chamois leather is sufficient
